

Multi-lane Converger

- Channels multi-lane discharge into single file
- Can accommodate label applicator, eliminating need for secondary driven conveying
- Up to 180 packs/min

The versatile Multi-lane Converger has been specifically designed to meet the need for channelling products from any multi-lane packing machine into a single line.

Fully adjustable to accommodate between 2 and 6 lines, the **Multi-lane Converger** can be changed to any configuration within minutes.

With microprocessor based electronics and a series of clutch-brake belt conveyor systems, the unit takes product from the multi-lane discharge and spaces into single file.

To ensure continuous product flow, a monitor checks the operation and can feed back a shut down signal to the wrapper.

Integrated Systems

The **Multi-lane Converger** can operate as a stand alone machine or it can be integrated with a range of manual or automatic production lines.

Converger & Check Weigher

Dual Output Converger + Two Weigh-Price-Labelers

Technical Information

Dimensions:

Line height range 800–900mm

Width: 800mm

Length: 1470mm

Weight: 300kg

Services:

Power requirements: 230V, 1 phase 50–60Hz

Options:

Dual output discharge

Product selection by channel

All Marel machines carry CE certification.

Key Features and Benefits

- Channels multi-lane discharge into single file.
- Robust, stainless steel construction.
- Can accommodate label applicator, eliminating need for secondary driven conveying.
- Up to 180 packs/min.
- Food quality belts for product transport.
- Microprocessor based control system.
- 2–6 lane to suit packer discharge.
- Quickly and easily adjustable for different size packs.
- Easy clean design.
