

Innova Grading

Production control system

Remote configuration of grading and batching devices

Innova Grading is a separate module in Innova and can be implemented stand-alone or as part of a complete production control system. The module allows for easy-to-use remote programming, control, real-time monitoring and reporting on actual performance. With the Innova Grading module, it is possible to report on portion sizes, weigh distribution of input material and giveaway.

Furthermore, Innova Grading allows grading programs to be shared among two or more graders and batchers.

Key benefits

- Real-time monitoring allows for intervention if performance deviates from expectations.
- Reports allow for historical analysis of raw materials and results.
- Easy, fast and cost-effective implementation.

Key Features

- Remote control and monitoring of grading and batching devices.
- Supports sharing of grading programs among multiple devices.
- Can be implemented stand-alone or as part of a complete and integrated Innova production control solution.
- Optional box labels can be connected to the grading device.
- Comes with standard reports on number of packs, weight distribution, throughput, size and quality categorization.
- Can work in conjunction with other processing equipment from Marel Food Systems, such as portion cutters, flow weighers and static scales.

Options

Box labelling & palletizing of produced boxes

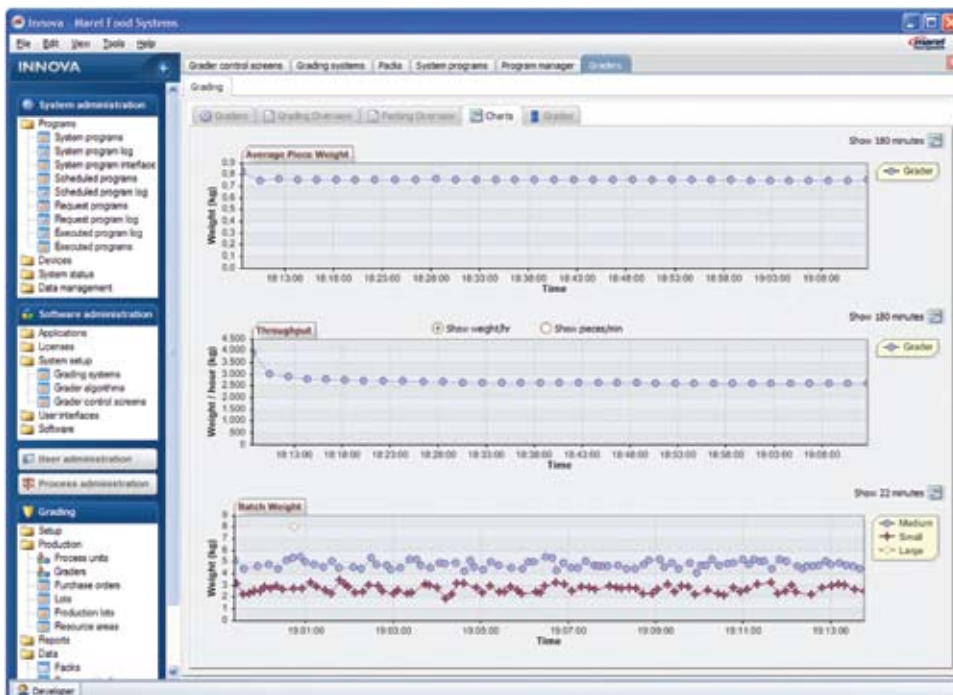

Order management

Innova modules required

- Innova Administration
- Innova Grading

Marel hardware that module is compatible with

- M2000 grader
- M3000 graders and batchers
- 4700 graders and batcher
- Compact Grader
- 7100 grader (requires remote control)
